Afternoon (Time: 1 hour 30 minutes) **Paper reference** **WST02/01**

Mathematics

International Advanced Subsidiary/Advanced Level

Statistics S2

You must have:
Mathematical Formulae and Statistical Tables (Yellow), calculator

Total Marks

Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. If a calculator is used instead of the tables, the value should be given to an equivalent degree of accuracy.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 7 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

Pearson

1. The manager of a supermarket is investigating the number of complaints per day received from customers.

A random sample of 180 days is taken and the results are shown in the table below.

Number of complaints per day	0	1	2	3	4	5	6	≥ 7
Frequency	12	28	37	38	29	17	19	0

- (a) Calculate the mean and the variance of these data. (3)
- (b) Explain why the results in part (a) suggest that a Poisson distribution may be a suitable model for the number of complaints per day. (1)

The manager uses a Poisson distribution with mean 3 to model the number of complaints per day.

- (c) For a randomly selected day find, using the manager's model, the probability that there are
- (i) at least 3 complaints,
- (ii) more than 4 complaints but less than 8 complaints. (4)

A week consists of 7 consecutive days.

- (d) Using the manager's model and a suitable approximation, show that the probability that there are less than 19 complaints in a randomly selected week is 0.29 to 2 decimal places.
Show your working clearly.
(Solutions relying on calculator technology are not acceptable.) (5)

A period of 13 weeks is selected at random.

- (e) Find the probability that in this period there are exactly 5 weeks that have less than 19 complaints.
Show your working clearly. (3)

2. The length of pregnancy for a randomly selected pregnant sheep is D days where

$$D \sim N(112.4, \sigma^2)$$

Given that 5% of pregnant sheep have a length of pregnancy of less than 108 days,

- (a) find the value of σ (3)

Qiang selects 25 pregnant sheep at random from a large flock.

- (b) Find the probability that more than 3 of these pregnant sheep have a length of pregnancy of less than 108 days. (2)

Charlie takes 200 random samples of 25 pregnant sheep.

- (c) Use a Poisson approximation to estimate the probability that at least 2 of the samples have more than 3 pregnant sheep with a length of pregnancy of less than 108 days. (3)

4. The continuous random variable G has probability density function $f(g)$ given by

$$f(g) = \begin{cases} \frac{1}{15}(g+3) & -1 < g \leq 2 \\ \frac{3}{20} & 2 < g \leq 4 \\ 0 & \text{otherwise} \end{cases}$$

- (a) Sketch the graph of $f(g)$

(2)

- (b) Find $P((1 \leq 2G \leq 6) \mid G \leq 2)$

(4)

The continuous random variable H is such that $E(H) = 12$ and $\text{Var}(H) = 2.4$

- (c) Find $E(2H^2 + 3G + 3)$

Show your working clearly.

(Solutions relying on calculator technology are not acceptable.)

5. The random variable W has a continuous uniform distribution over the interval $[-6, a]$ where a is a constant.

Given that $\text{Var}(W) = 27$

- (a) show that $a = 12$

(2)

Given that $P(W > b) = \frac{3}{5}$

- (b) (i) find the value of b

(2)

- (ii) find $P\left(-12 < W < \frac{b}{2}\right)$

(2)

A piece of wood AB has length 160 cm. The wood is cut at random into 2 pieces. Each of the pieces is then cut in half. The four pieces are used to form the sides of a rectangle.

- (c) Calculate the probability that the area of the rectangle is greater than 975 cm^2

6. A bag contains a large number of counters with an odd number or an even number written on each.

Odd and even numbered counters occur in the ratio 4 : 1

In a game a player takes a random sample of 4 counters from the bag.

The player scores

5 points for each counter taken that has an even number written on it

2 points for each counter taken that has an odd number written on it

The random variable X represents the total score, in points, from the 4 counters.

- (a) Find the sampling distribution of X

(6)

A random sample of n sets of 4 counters is taken. The random variable Y represents the number of these n sets that have a total score of exactly 14

- (b) Calculate the minimum value of n such that $P(Y \geq 1) > 0.95$

7. A continuous random variable X has cumulative distribution function $F(x)$ given by

$$F(x) = \begin{cases} 0 & x < 1 \\ k(ax + bx^3 - x^4 - 4) & 1 \leq x \leq 2 \\ 1 & x > 2 \end{cases}$$

where a , b and k are non-zero constants.

Given that the mode of X is 1.5

- (a) show that $b = 3$ (3)
- (b) Hence show that $a = 2$ (1)
- (c) Show that the median of X lies between 1.4 and 1.5 (4)
